Prevention and Treatment of Age-related Diseases

Biogerontologists are now in a position to construct general principles of aging, and genuine attempts are being made to test and develop effective means of intervention, prevention and treatment of age-related diseases, and for achieving healthy old age. This book takes status of the molecular, cellular, hormonal, nutritional and lifestyle strategies being tested and applied. It comprises inter-dependent chapters written in the form of critical reviews by the world's leading researchers and practitioners in their respective fields. The format of the articles is a semi-academic style in which research data from various experimental systems is presented while focusing on their applications in human beings with respect to the prevention and treatment of age-related impairments.

Contents: Preface.- 1. Biological causes of aging and age-related diseases.- 2. Immunity, inflammation and infections during aging.- 3. Progress and development in Parkinson's therapy.- 4. Understanding and treating Alzheimer's disease.- 5. Slowing down age-related muscle loss and sarcopenia.- 6. Pathophysiology, prevention and treatment of age-related osteoporosis in women.- 7. Arthritis and its treatments.- 8. Recent developments in the treatment of diabetes-2.- 9. Age-related cataract: management and prevention.- 10. Skin aging: pathogenesis, prevention, and treatment.- 11. Aging and periodontal disease.- 12. Molecular diagnosis of breast cancer.- 13. Prostate disease in the aging male.- 14. Human premature aging diseases: molecular biology to clinical diagnosis.- 15. Protein aggregation in aging and age-related diseases.- 16. Nutritional deficiency and its modulation in old age.- 17. Dietary fats and age-related diseases.
